## NEWS

## From front page

'We're always getting claims that individuals have hacked the system. Mosi of these claims are nonsense and some are even silly.' He quoted one example of an individual who claimed to have been hacking when all he had done was pass through a gateway.

The gateway system allows Prestel users to go on to other machines holding information for public or private access. The Nottingham Building Society is one such gateway which allows members of the society to use and view their accounts from home.
John Webster, NBS manag. ing director, told HCW: 'I don't believe it! Nobody has hacked into our system. It took us two years to build and has now had two years of live use We have Iried every hack possible and with 10 levels of security, only four or five of which are obvious to the user, nobody - but nobody - can hack us.

Mr Webster regards hacking as a healthy development. 'They're just individuals trying to beat the system and find a freak hole in the security. We are not against them in any way and would give them a welcome if they can demonstrate their methods and facilities to me. Many of the claims sound dramatic but come to nothing when we ask for a demonstration.'
Some of these stories have been proved correct, as a Prestel spokesmat admitted. Recent stories of a mole within Prestel have been proved false. however, and the company making the allegations, Timefare international, has published a full withdrawal of its claims.

All claims of hacking and other unauthorised access to the system are fully and speedity investigated and very few are proved correct, but all are taken very seriously indeed. We would be very interested to hear from any of our readers who have gained access to such databases and will pass any contacts on to the companies involved.

## It's all Greek

If you're well up on Greek mythology you'll stand a better chance at success with Ocean's Gift from the Gods, on the Specirum. You star as Orestes, and your responsibility is to avenge your late father, King Agamemnon, Your task takes you to the labyrinthines below the palace, in which you must find the Euclidian shapes.

Your strength is sapped with | ware. every action you perform, and, as always in strategy/adventure games, there is both hazard and heip at hand.

Gift from the Gods costs £9.95.

Ocear, 6 Central St, Manchester M2 5NS

## Save your money

The Panda 20/64 cassette interface is a new low-cost way of saving Commodore programs to an ordinary domestic cassette recorder. At 217.99, it means you can save moncy on the price of a Commodore recorder by using an ordinary cassette recorder which you may already have.

The Panda 20/64 can be used with both Commodore 64 and VIC-20. It features a phase swich which enables it to cope with different types of recorder and tape quality.

Pact Internationul, PO Box 50 , Peterborough

## Break the bante

Micro Power looks set to break the bank with its new game for the BBC micro. To be launched on 15th February, Castle Quest is a combination of arcade, adventure and strategy game types.

So conlident is the company that players will find the puzzles difficult, that it will pay fl to anyone who cracks the game within three months of purchase. That isn't the end of the drain on Micro Power's bank account, however.

There will be a national high score competition for all those who have claimed their pound bet. This is the point where the arcade game comes into its own. When you have actually cracked the puzzles you have to go on to the highest score that you can.

The score you get is based on two elements. You get a number of points for each puzzle and location which you complete saxisfactorily and this can be increased by cutting down unnecessary waiking around the castle. This means that the player who can find the shortest route gets the highest time bonus.
Four players who have claimed high scores will be invited to Leeds for a play off game at Micro Power HQ, the winner carrying off 1500 of computer equipment and soft-

The game is played on a large graphic screen and involves the manipulation of a small quester complete with backpack. The sereen scrolls in four directions and is very smooth indeed in the horizontal. The castle itself is filled with cteatures of all types from red monkeys (another name for a red herring? Ed) 10 castle guards.
The puzzies are all quite logical and involve such things as getting out of prison before you starve. You move around and use objects in the castle to solve each problem. We have to admit that eves on the short preview we had there were a number of people in this office who were hooked on the game.
Look aut for a full review in a future issue of HCW.

## Micro Power, Northwood Hse, Sheepscar, Leeds

## Thrills and spills

Indiana Jones has now made it to the small sereen - Indiana Jones in the Lost Kingdom is the latest adventure for the C64 from US Gold. Mindscape, the

American originator, has ticensed the game to US Gold and it goes on sale in the UK for 29.95.

There are six perils - and no rule book. Indy's arch enemy Ivar Reiss is also after the treasure. Options include playing against the computer, or two players assuming the roles of Indiana and Ivar.

Each of six rooms contain a puzzie which must be solved before you can find your way out. A precious artefact is what you'se after.

F-15 Strike Eagle is a second new release from US Gold. This one is on licence from Microprose, and costs $£ 14.95$ on disc and cassette for the C64. Included in the price is a comprehensive flight manual.
F. 15 Strike Eagle is also available on Atari dise and cassette while a Spectrum version is scheduled for the early part of this year.

There are four skill levels in this jet-fighter simulation, which features scrolling 3D graphies as seven missions are recreated.

US Gold, Unis 10 The Parkway Ind Cenire, Heneage Si, Birmingham B74LY

Coin it in at Micro Power

## Profits to freed the hungry

Cheetahsoft's Perils of Bear George, now out on the Commodore as well as the Spectrum, is the source of a porentially large donation to the Ethiopian famine appeal.

Profits from both versions will be handed over to the Save the Children fund, destined to aid starving Ethtopians. Howard Jacobson, Cheetahsoft's managing director, said: 'We fefs that more money could be raised through our latest game than by any other method. Protiss will be sent directly to thase in need, and the more copies sold, the greater the contribution.'

The Spectrum version has been on the market for three months, while the Commodore version is a recent release. A spokesman lor Chectabsofi said: 'Cheetahsoft sells each cassette for 22 or $£ 2.50$ for each game. We will be donating ali of our share of the profit.

As yet, we're not sure if the shops will be coming in with us on this one, as they did with Band-Aid's record, but it's up to them.
'If the game sells well, we could raise $£ 30,000$ for the famine appeal', be continued.

Cheetahsoft, 24 Ray Street, London ECIR 3DJ

## Rights <br> change hands

The tights to Currah Computer Componemts have passed to dk'troniks, after months of negotiation with the receiver. Currah experienced tinancial difficulties before Christmas and the receiver was called in. Thell dk'troniss sel up a deal whereby all intellectual property rights were passed over, and now dk'tronics is manufacturing Currah products in its own factory.
Neil Rawlinson, financial director, said: 'We've now acquired exclusive marketing rights to the entire Currah product range for a substantial sum. This includes a major new product in the hi-tech field, which will be developed by dk'tronics over a broad range of home computers.
'One person has already beem appointed from the Currah team and there is a possibility of other members of staff joining us.'

Mr Rawlinson commented on
the statement which Welwyn

Electronics had sent out, claiming that Welwyn was manufacturing and selling Currah units. Welwyn has the right to sell the product under a negotiation set up last Spring. At dk'tronics we are looking at long-term plans for Currah products - we will be supporting the chain stores and servicing orders immediately, We have had long-term admiration of Currah and we have the facitities here at dx'tronics to go into manufacturing the units quickly.'
'ft's part of our deal to reassure Currah consumers. All our orders will be honoured and fuffilted immediately.
dk'tronics, Unit 6, Shire Hill Ind Est, Soffron Wolder, Essex CNII 3 AX

## All ett sea?

Shoot the Rapids, from New Generation, is a canoe simulation for the C64, Movement is provided with the joystick, so that realism is maintained. To dip the paddle to the right you move the joystick right, and is you keep moving the joystick in one direction, your canoe wit! turn full circle, as it does in real life.
There are five levels of difficulty and the current becomes fiercer as you progress through the game. New Generation claims the graphics are superb and the music excellent. Price: 87.95.

New Generation, The Brookfonds, 15 Sumnybank. Lyncombe Vale, Bath BAZ 4 NA

## Front line heads range

New releases are few and far between in the post-Christmas period, but Interceptor Micros is defying trends to release five new games.

Front Line, for the C64, stars you at the controls of the Death Tank Interceptor. Its armour plating can withstand direct hiss and repair itself - good job 100 , since you must go behind enemy lines and regain control of your supply dumps. You have no bacli-up support and the enemy is superior both on land and in the air. Price: $£ 7$.
Bigtop Barney, also for the C64, features you as Barney the clown, whose job description specifies that he must complete four death-defying acts to win the audience applause. High wire, monocycle, strongman or frecing the lion cub from ins cage - these are your choices,
and they're by no means as easy as they may seem. Price: $£ 7$.
Caverns of Sillach, 17 on the C64, is an arcade space adventure, while Halaga, on the Spectrum ( $£ 5.50$ ) is described as a fast-moving space fantasy. While on an exploratory mission swarms of insect-like creatures descend on you in a fury. Your anti-matter plasma gun is your only weapon.
Villain, 56 on the VIC-20 with 8 K or 16 K expansion, involves you in a life of crime, PC Plodd dogs your footsteps in this arcade game.

Interceptor Micros, Lindon Hse, The Green, Tedley, Hawts

## Skramble for more machines

Anirog is extending its Commodore range with Skramble on the C16 and Flus/4. The storyline goes: You are fighting through six sectors, continuously destroying fuet dumps, to get to the enemy command base on planet earth.

Rockets, UFOs, meteors and fireballs beset you in the first three stages, while in the next three you manoeuvre through a city, maze and command base.

Anirog claims smoothly scrolling screens are a star feature, as well as uniquely brilliant colours.

Also scheduled for conversion to these machines: Moon Buggy, Peech, 3D Time Trek, Flight Path 737, Zodiac and Las Vegas, at $\mathbf{4} 6.95$ each.

Anirag, Victoria Ind Park. Victoria Rd, Dartford, Kent DAISAJ

## ......nnd more for the C16

And Melbourne House has also brought out software for the C16, with two compliation tapes taken from Commodore 16 Games Book. Commodore 16 Games Packs I and 11 cosi f. 95 each, and contain 15 games on each cassette.
Both arcade and strategy games are included.

Melbourne Hse, Cassle Yard Hse, Castle Yard, Richmond, Surrey TWIO 6TF

## AMSTRAD CPC464 PROGRAM

## You＇re a guerilla fighter on the planet Zarkon．You＇re defenceless and without ID， but your mission is of paramount importance． By David Pope

Having landed at Zarkon space－ port your objective is to deliver plans of the coming assault on the evil Federation to the Rebels who are somewhere in the city of Zarkon on the planet Zark．

There are many hazards（you have no weapon and no identity card）and strange situations－ some fatal－others with a touch of humour．
If you manage to deliver the plans you must then get back to your spuce－craft and leave．

You may come across certain locations where there are clues （in the form of messages）or clues in what you find at a particular location．

A variety of two－word inputs such as LOOK UP or READ MESSAGE will help you with the task at hand．

You have 125 moves to complete the mission before the Federation troops finally catch up with you．

## How it works

10．50 author＇s tizles（REM）
$60-90$ sen mode and colours

## David Brooks guides you through the, hazards of HASIC

If you've every done even a little programming on your Commodore, you probably know that the BASIC INPUT command ts the usual way of getting information from you to the computer through the keyboard. Here's the simplest program I can think of which uses this command+

10 INPUT "LAST NAME" ;NS
20 PRINT "YOUR LAST NAME IS ":NS

Type in this program and run t. When the input message appears, followed by a question mark, type your last name and press the RETLRN key. (All the keyboard inputs requested in programs in this aructe should be followed by a RETURN unless noted otherwise.) Your name will be printed on the screen following the message "YOUR LAST NAME [S ${ }^{י 1}$
Thus is, andeed, very simple, Now I'm gong to show that the INPUT command is full of surprises and traps for the unwary. Change line to to read

## 10 <br> "LAST NAME, FIRST NAME";N\$

Run the program, when the input message appears, type your last name, a comma, and your filst name. Now you should see the message "?EXTRA IGNORFD" and your last name pronted
li's butle qurks lake this which are frustrating for the beginner. They make programs hard to use and will cause your friends to snicker at your "dumb" computer. Afiter all, you've asked it to accept a perfectly reasonable input and it has responded by sending back meaningless messages and mtsunderstanding what you intended
The problem is that the INPUT command interprets commas in a spectal way, as a "variable separator" which divides one input varable from another. It thinks you're trying to give it more mformation than it is looking for, so it just tenores part of it. Armed with thus knowledge, we can achteve the result we want for last name, first marne ingut:

# Taming the BASIC INPUT command 

FIRST NAME';LS.FS
20 PRINT "YOUR NAAE IS ":L\$,'",",Fs

Try ut. It works, but doesn't in seem like a lot of trouble? You mught think of using some other punctuatton to separare last and first names, even though commas are what you'd naturally use. Try this'

10 INPLTNS
20 PRINT NS
When you run the program and the "?"" appears, type the following characters: ABCD EFGH. When this is printed you'll sce onty ABCD . Why ${ }^{3}$ You're right; the INPUT command also inuerprets a colon as 童 vartable separator. There's really no good explanation for thys, but that's the way il works. A semicolon or a slash, on the other hand, will be accepted as part of a string variable. You can verily this by typing ABCD.EFGH or $\mathrm{ABCD} / \mathrm{EFGH}$ in response to the "?"
Here's one more example of a potential problem with INPUT:

## 10 INPUT "TYPE ANY Nl'VBFR" <br> 20 PRINT N

Note that there are no " g " signs after the N thus lume When you run thas program, it works line if you type dagits in response to the "??" sign (Don't forget the Return at the end.) But, try typing a letter tnstead. In that case you get the message "? ${ }^{2} E D O$ FROM START" and the mpul prompt is repeated. This is the Commodore's rather obscure way of telling you that you've typed something it can't accept, in this case somethong other than a number
If your program asks for * number with a numerical variable like N insread of an alphanumeric character with a string vartable like NS, the INPUT command will only accept numbers. Note that if
you've asked for a strung vanable you can respond wifh one or more digts, which wtl then be treated as alphnumeric information. But it won't work the other way around ${ }^{1}$
There are more examples of what reasonable people migh consider to be 「allings of the INPUT command. I don't have the space to go into all of them here. It's 100 bad, because these problems make computers appear capricious and vndictive, if you're going to do any but the stmplest programming, and especially of your programs are going to be used by others, you really shouldn'I use the INPLT command at all

The way around INPUT is to use GET. This command accepts one character at at tume from the keyboard. Try this program

## 10 PRINT "TYPE LAST NAME, FIRST NAME": <br> 20 Ns <br> 30 GE I $\$$. IT $\$$..." THEN 30 <br> 30 IF $Z S=$ CHR $\$(13)$ THEN 70 <br> 50 NS $=$ NS + ZS' PRINT ZS. <br> 60 GOTO 30 <br> 70 PRINT: PRINT NS

This may sem like a lot of trouble because you have ta construct your own version of an input routine, but there are lots of advantages. Firsh, let's look at what each line does.

Line 10: since there's no INPUT command with its optional prompling message, J've pronted ms own message telling you what to do Note that there's no "?" automatically printed after this message, because that comes from the INPUT command
line 20: defines a strung variable with notheng in it (a null string)
line 30: GETs a character. The computer just wazts for you to do something. (Note; a Return character should not be typed after responding to a GeT)
line 40: if the character is a RETLRN (ChRS(13)) then go to line 70 and pront the reshl
line 50. if ZS Isn't a RETURN, add (concalenate) it to $\mathrm{N} \$$ and print the character.
Ine 60: goes back to the GET command
the 70: prints the results.
When you sun ths program, you'll notse that there's mo blinking cursor, but you can type your responses anyhow. Here's one addinonat word of warmang' if you type a quote mark, your computer will lock up and you'll have to turn in off to regain conirol. I'll show you how to overcome these two difficultues later

The basci advantage (and cha-enec) of this program is that GET doesn't try to interpret your responses like INPUT does. You have an opporlumity to look at each character as 11 comes from the keyboard, and with a little exira programming, you can respond to or ignore any character you wke. The program steps would be unseried beiween lynes 30 and 40. Line 40 is one such programmed interpretation, as it tells the computer to recognuse a Return as the end of your response to the input prompt message
As another example of controiling the response to a particular character, add this line'

## 35 IF Z\$ = "X" THEN 30

The result is that Xs entered from the keyboard are agnozed
GET isn't bothered by commas, as you can see when you respond with your last name, a comma, and your first name. It doesn't mind colons. either; try ignortng the instructions and just typing ABCD:EFGH
Now I want to show you a particular situanon where carefully thoughr out keyboard input is imporiant. Suppose you're whang a menu-driven
program which starts something lake this：

10 PRINT＂MENU＂
20 PRINT＂FIRST OPTION＂ 30

PRINT＂SECOND
OPJION
40 PR1NT＂THIRD OPTION＂
\＄0 PRINT＂END PROGRAM＂
If you want to select one of these options，you have to enter a diglt berween I and 4 and use the value to direct the program to the appropriate place．If you simply use INPUT to ask for an option number，there＇s no way to protect yourself agaitst keyboard mastakes．But it＇s possible to sort out alt the inappropriate responses like this，

60 PRINT＊＇SELECT AN OPTION（1－4）＂
70 GET ZS：IF ZS＝＂r THEN 70
$80 \mathrm{Z}=\mathrm{VAL}(\mathrm{ZS})$
90 IF $2>0$ AND $2<5$ THEN ON 2 GOTO $100,200,300$ ，

95 PRINT＂INPUT ERROR． TRY AGA［N．．．＂；GOTO 60 100 PRINT ＇PROCESS OPTION \＃！＂

190 GOTO 10
200 PRINT＂PROCESS OPTION W2＂

290 GOTO 10<br>300 PRINT＂PROCESS OPTION \＃3＇

390 GOTO 10<br>500 PRINT＊PROGRAM FINTSHED＇

If you try this program， you＇ll find that there are only two ways to termunate it：by pressing a diglt from I to 4 （the proper response），or by pressing the RUN／STOP key．All other keyboard inputs are ignored． Note that a Return character should not be typed after responding to this GET．

You could use INPUT instead of GET by replacing lines 60 and 70 wrth something like this＇

## 60 INPUT＂WHICH OPTION $\cdots, ~ L S$

I prefier to use GET because a RETURN is not needed

Note the use of the VAL function in line 80 ．It converts a string variable（Z5）to a numerical vasue for use in the ON．．．GOTO command in line 90．All non＋numeric characters have a VAL of zero．

Now，ssn＇k this knd of performance what you＇d really expect from a program？tt＇s completely protected agausst mput errors．You can even
prevent the computer from accepung uput errors．You can even prevent the computer from acceptimg the RUN／STOP key， as I＇ll show you later，but this is a pretty drastic step to take untal you＇re sure your program is doing exactly what you want it 10：

## Solving your <br> keyboard inpui problems

A CBM 64 program called KEYBOARD GET is shown in Listing J．It consists of a short man program（lunes $100-150$ ） and a subroutane 【lines 7000－7270）．The subroutthe can be incorporated into your own programs：the matn program is sumply a demonstration of this subrouthe．When you type in the program，you can leave out all the REMs to speed up the operation．allhough the subroutine responds very promptly just as it as．Here＇s an explanation of what some of the hnes do：

Line 130：pronts a message which serves as the input prompt and calls a subroutine to replace JNPUT
lines 7000－7010：POKE at zero to 808 to disable the RUN／ STOP and RESTORE functions．Make sure you really want to do this，and remember to tonable these functions before leaving the subrouthe（see line 7180）． The POKE to 650 gives character repeal capabiluy to any key which is held down．This function is disabled in line 7170
Une 7020：initualises the input strang［\＄to a null valte CHRS（175）pants an under－ line that functions as a non－ blinking＂eursor＂durng the keyboard entry process． CHRS（157）is a cursor－left （backspace）command
Inte 7040：responds Io a Return or shifed Return character by ending the keyboard input．
lime 7050 assigns string variables to the function keys．

If you think you＇ll be using certan words or other character sirtngs frequently En your keyboard input，you can store these strings so they can be entered into the input string variable with 素 single keystroke．These strings are then concatenated to the imput string that＇s beng created．Processing these furktions，begrang at line 7190 ，can cause a smal！ but perceptible delay in keyboard response if you＇re a fast typist．If you don＇t think you＇ll use this part of
the subroutine，just delete line 7050 or mactivate at with a REM at the beginning of the line．
lines 7070－7080；respond to the INST／DEL key by treating it as a backspace key which removes characters previously entered in I\＄．You won＇t be able to backspace past the beganning of I\＄，i．e． when LEN（IS）$=0$
Fines 7090－7100：thas 15 the heart of the subroutine，as it defines which characters will be allowed in I\＄．Use the ASCIt－Lo－character conver＊ ston tables th your user＇s manual as a guide．Basically， I＇ve allowed lowercase and uppercase letters and some other printable characters， but not graphics symbols． You can restrict the range of acceptable characters in any way you choose．
tine 7120：prints the current character（s）on the screen， Check the lengih IS will have after the new character（s） have been added to it．If the
length will be more than 255， the subroutine truncates your input strang at 255 characters．Note ithat this subroutine allows you to input strings of up to 255 characters directly from the keyboard，whereas the INPUT command is limited to 80 characters．
line 7130：appends the new character（s）to IS．There＇s a trick to acceptins a quote mark（CHRS（34）as a valud character．One you print a quote，舷 may occur in line 7120，the Commodore system goes minto the＂quote mode ${ }_{1}^{+*}$ with interesting results．（You can try it for yourself by putiong a REM in front of LF ZSㄸCHRS （34）．．．．but as 1 mentroned previously，you＇ll have to turn your CBM 64 off to get control of it again，）You have to fix this by turning off the quote mode with a POKE to 212 anytume your response to the GET is a quote mark．

## SPECTRUM PROGRAMMING

## David Nowotnik HCW regular contributor, shows you how to loop the loop in machine code

Anyone with expenence of BASIC programming will know the power and uility of FORNEXT loops - the ability to repeat many umes over a similar sequence of operations within a few liner of program. Loops are important for the same reasons in machine code. Here are two ways of looping in $\mathbf{Z 8 0}$ machine code, with examples for the 2 X Specirum.

If you want a loop which is repeated no more than 256 tumes, then the 280 command DJNZ is the one to use. DJNZ slands for Decrement $B$ and Jump if Not Zero. This means that the B register is used as a loop counter. When the DJNZ instruction is encountered, the value in the $B$ register is decremented (l.e. the value is reduced by one). If the new value is not zero, then the program jumps back to start of the loop. If it if zero, then the program conunues with the instruction immedrately following DJNZ.

DJNZ -s a two-byte instruc. non: the first byte is the opeore; the second is the operand which defines the distance (in bytes) and direction of the jump in the program. With DJNZ you can jump forward or backwards in the program. The jump wall be forward if the opcode has value between 0 and 127. The distance of the jump, in bytes, will be the value of the opcode: you start countug from the address of the opcode immediately following DJNZ.

For operand values between 128 and 255 , the jump is backwards, as required in a toop. The distance of the jump,

## Looping the loop on the spectrum

in bytes, is calculated by $256-x_{0}$ where $x$ is the value of the operand.
To use DJNZ, the register B has to be loaded first with a number, which is the number of tumes you want to go round the loop. A simple assembly language example is shown in Table I. Register 8 is LOADed with 64, and the register part HL is loaded with the starting address of the Spectrum's attribute file. By using a loop, the firss 64 bytes of the attobute file have 100 placed 1 nto them. Check that you can see how the operand to DJNZ is calculated in the example.
To try the example, type in the BASIC machune code loader in Table 1: SAVE it, then RUN it. Try changing the values underlined, and see the effect; this will help you understand thow the routune works.

For loops repeated more than 256 times, two-byte regaster has to be used as loop counter. There is no sungle instruction to form a loop with a register par, so a few lunes of code are required to perform such a loop. Take a look at the example in Table 2.
The BC register pair is used as the loop counter, and thas is LOADed with the value of the number of carcuis of the loop which are required. The HL par is agan loaded with the start of the attribute rile, and the attobute file is filled with the value 100 using LD (HL). 100 from wathin the hoop

To perform a large loop, the BC register is firss decremented. This operation does not set the zero flag when BC is zero, so we need to perform another operation to check of BC holds the value zero. This is done by the sequence - LDA, B:OR C. This in effect carries out a logical OR operation on the values in the B and C registers. The result of this operation can only equal zero when $B=0$ and $\mathrm{C}=0$; i.e. when BC holds the
value zero. If $B C$ is not zero, then the loop is repeated, otherwise, a RETusn to BASIC 15 performed

The BASIC loader in Table 2 will allow you to try the example in the assembly language listing. Again, type it in, SAVE it and RUN it. Also, change the underlaned numbers to observe the effect. But be careful as you could crash the computer if you use too big a number in your loop counter.

## SPECTRUM PREWGRAM

# Up <br> In R 8utcher＇s game you must gauge the speed and range of passing vessels in order to score accurate hits．Think before you move 

The object is to stak as many ships as possible with the 50 torpedos．The sereen consists of a periscope view，across which ships of varying tonnage，speed and range pass．
Whether a ship is hit or not depends on when the torpedos are fired in relation to speed and range．
There are three speeds and three ranges，giving mane different combinations，as well as random movernent tight to left and vice versa．
Any number of torpedos may be fired at one shup．To the right of the periscope view is an indicator panel which gives all necessary informatron
The size of the ships（in graphics）and the tume they take

## Connomball Chess TI-99/4A E6

Stamless, 10 Alstone Rd, Stockport

The insirucuons for this complicated war game ate contaned on one side of the cassette They warrant a small booklet to themselves. There is just too much to semember, and tt's awkward loading the instructions every time a problem occurs. The game rakes a long Inme to load, so this also miltates againsi the practice

Despite its mame, there's no chess involved; ! assume that the strategic requirement crused the author to equate it with chess.

It is much more sophesticaled than the usual variesy, bad will probably not appeal to those who don't lake thanking about

There are two kingdoms separated by a river, and - guss whal: - you are the fulter of one, and the pulte of the other has totd you ta keep your tongte out of his river. The resule is war
The computer acts as moderator, decidug who gets so move how far before they can shoof, and the graphics are good The game does not lake itself very senously and for those who prefer toy soldiers this would be agood buy. This needs Externded BASIC

## All or nothing

 51.
## Abbex

## Here us a gapse that pushes back

 the boundaries of whal can be achueved with the Spectrum.You parachute into an army camp, populated by guards and dogs. Your objective is to rescte the seeret files, hadden in one of the warehouses. The whole camp ts depicted in full diagonal perspectuve 3 D as you run around evading the entemy. Wh (urrat Moro Spereth compaubitily, I was asionshed when one guard shouted 'Stop or l'Il shoot'. I didn't he did, 1 lost. As of that's now enoush, you can enter atl the warelouses and the interiors are depicted in lial in hu-res grashtues

Initally, you must enter the
suau office and opent the safe conianning the warchouse keys. You have 30 seconds to find the Tour digit combination, before the atarm sounds. All very exciang. To really surceed you have to pick up objects in the warehouses, inctuding gas, bombs and gurs. These can be used to kitl or distract the guards and dogs
Insuructrons are on the screen and are very explect, coverng 23 screens. This program achieves a very high standard. M.B.

## Penman

BBC or any machine with RS232 or RS423
Penman plouter f199: cable (for BBC) [20; unlity pack £25, plottong platen must be added to all prices

Penman Products, \& Hazel wood Close, Dominton W'ay, Worthing BN/4 BNP

Is it mouse? A turite? A printer? A plotter? It's a Pemman and it can do all these things?
In the race to find interestung and useful add-ons, thus product is likely to be a real Wimner. Its mant function is as a primer/plotter, but it doesn't print or plot in the usual way. Most printers are designed to move a print head of some type across a fixed piece of paper not the Penman, With thus machune the paper is laid flat on the desk and the print head walks acrost the surface, drawung as ti goes.

This might stem lake just another turtie of the kind you find recommended for young chaldren to use with a l.OGO language pack, The penman can be used in this way 100 and has a spectal hole which holds a pen at the centre of rotation for just such a use. But this is much. much more than a turtle for 11 has a full character set and can be uned to print text, las well as thagrums, using its advanced theee-colour ploting features. With the addilion of mouse roulines this has to be one of the most flextble and potenialiy

Penman or mouse?

What is there the Penman can't do? It's a mouse, turtle, printer and plotter all in one. Dave Carlos checked it over for you

But what is it like? Well, from the prints shown here you can ste it certanly does work very well as a printer/plotter. I tried it with all types of prosting styles and the trace was very clear and accurate. 1 always test a ploter by making it trace the same pattern twice on the same prece of paper and measuring its aecuracy. The Penman isn't sultable for this test, since each ume you tell it to print or plot it goes to find the edge of the paper and, using a parr of optical sensors, starts the piot th slightly differing places. The only problem 1 had in thas respect was that new pens tended to smudge a lirle, but thes soon wears off.

The Penman mus! be used

with good quality paper and this can be qute expensive, It must plso be used on a good hard surface, as dark as possible, 1 used the optional plotung platen and this mede ife very casy.
Sofiware is an essential, It contans afl the routines vots might need and all the drawing bere were printed llaning the package. Of at the detver routines suppled the mouse is the most difficutt to use but you soon get the hang of thes too. If you want to use thes as a real turile the Acornsof LOGO pack for the BBC can drive the unit very easily. If you want to program your own roulines you use escape sequences just as you would with en orthodox printer. The manual could be a bittle more helpful in this respect though
Whist 1 cannot see masy people buying one of these unuts as a toy, they are well designed and built and will be sdeal in schools and business applicathons where the type of output is destred. I have no hesstation in recommending the product.
D.C.

## BBC

> Deadly war machines have massacred your comrades and you alone can save your planet．Achieve the impossible in Shingo sigiura＇s exciting game

Your home planet Xuvious is under attack from the warbots of the evil planet Capious．The fight has been long and desperate and now you find that all your comrades have been kthed and you tre the last remlauning defender．
The only hope of survival is for you to destroy the whole of the gigantic Warbot fleet using your mysterious little batileshup，codenamed Destron．
The Warbots are efficient machines designed purely for the purpose of kiltung tind your chances of success seem very slight．

## How II morks

## Unulng one

10－40 REM Histements
50 defines characters and envelopes used by second programs
00 assembles short machune curde roulire to determane filing system in 1 se
70 nssembits machne code roulinet used by second program
日昭 selects MODE7 and switches off flashing cursor
90 prints instructions
100 start of procedure which pr nts instructions
1t0－260 print instructions
270 checks which filing system in use and takes appropnate action
200 end of this procedure
290．320 called if filing system present is disc，Wats untul space bar pressed and proceeds to chame in second progtam
$330-360$ called it filing sysem is taper，Delines text window and chains tn second program wihout walsing
370－390 function returns number dependiag on present filling system
400－470 asstrmb．e machune code routne used in function above．A call made to OSARGS with secumulator set to zero
480－910 assemble is number of machine code routures used in second program
920－1240 define various characters including aliens and ship，defines tuvelopes

## save the world！

Billions of lives are at sake． You can＇t afford to fall．
The game consists of two programis．Type in the first and save it under the name INTRO． Type in the second and save ut under DESTRON．This must be immediately after INTRO on the casseve system．The first program must be run before the second

When the main program toads a brief set of instructions appear which wat until you have pressed the space bar． Then the screen clears and the Warbots move into formation． The green Grabouds move down the screen weaving left and right and the yellow Eaglons slide towards you，You lose when one of them manages to land on the planet surface $Z$ moves you left and $R$ is raght Press RETLRN to fite

## MSX：The pros and cons

The news columns of HCW and other magazmes have regularly had smppets of informatton about the new stondard of MSX－the best thing since the ZX80．An enture battery of computers ready to destroy the British computer industry is sweqping over from Japan to the concealed hornor of Commodore，Sinclatr and Acorm． They have good reason to worry os Joe Public is bound ro buy these new arrivals with all the good publtcty ensured by trips to the South of France（I wish $\boldsymbol{Z}$ was a computer journalist！）．

However，if betreve there can be disodvantares from everyone＇s point of vew．By sefting a standard with which manufocturers must comply，Microsoft is atso selting a limuting factor．Keeping BASIC the same is easy to work round－just add POKEs d Ia Commadore－ but hardware is another thing entrely．Mosf of the chips ane more or less the best avatable－T19929 wdeo display processor and AY－3－8910 sound chip．Even these have been around for some time，buf what about the Z80A？ Most new busmess micros ane using 16 or 32 bit processors and shis is starting to move into the home market but the 280A is the widely used but rapidly becommg ouddated 8 DI．

Looking ot the past two years in the computer matustry，who can betheve that MSX will be a wable afrernative two years from now？What is innovative today is outdated in a year－remember the $2 \mathrm{X8t}$ ？ People could not keep quet about if when it was daunched，but now 81 owners are sneered upon by owners of Spectrums，launched Just a year later

The ZX8I was a greal teap forward in micros，bul MSX is just an average destgn，not much different from a Commodore 64 or Texas Tl－99／4A，so who can guess when it will become outdared？

OK，so up to now I sound the a spokesmon for Sinclair，bui I can see some advantages，Apart from the obvous compothbilty，some spectafised features con be added，although soffware exploiting this will be exclustive to the machine．My favounte so far is Yomoha＇s with its superb sound factifies．

I wall conchude with this advice for anyone inverested in buying a new computer and constering MSX．Do not rake the MSX sign as a guarantee of bemg the best computer．Look at the competrion carefully，Constder all the pras and cons and if you wami innovation，do not look to Japan．

Rubin Elworthy，Maudstone

## 2X81 PROGRAMMING

## Diana Smith explains how to simulate the SCREENS function on your 2X81 with a short machine code routine

One of the functions missing on the ZX81 is SCREENS. On the Spectrum, SCREENS is used either to save the display on tape as a block of code or to read a character position off the display.

When used to fetch a character from the screen, t works like an inverted PRINT AT statement, giving the code of the character at a specified line and column on the screen This operation can be done farty simply by PEEKing the display file. However, PEEKing a screenful of characters using BASIC is rather slow

The machine code rouline given below speeds up the operation considerably and copies characters from the display into a variable so that they can be SAVEd
Firstly, it helps to understand how the ZX 81 display file 15 structured. In the IK ZX8I. space is at a premum and at switch-on the display consists of a NEWLINE market followed by an end-of-line NEWLINE for each of the 24 lanes of the screen

This means the display file is only 25 bytes long. As characters are put on the screen, the file expands to accommodate them. When a RAM pack of more than $31 / 2 \mathrm{~K}$ is added, the display fite is automatucally expanded to $1 t 5$ full size, that is a NEWLINE market and 24 lines of 32 spaces, each ending with a NEWLINE end-of-line market.
To illustrate this, consider the following two BASIC statements.

## 10 LET SCREFNSTART= PEEK $16396+256^{4}$ PEEK 16397

20 PRINT PEEK (SCRE.

ENSTART $+1+\mathrm{C}+33^{*} \mathrm{~L} \mathrm{~J}$
Line 10 looks up the vaiue in the system varnable D-FILE and stores its value in the varjable SCREENSTART This holds the address of the first byte of the display file and Will be the first NEWLINE

## How to improve your image

character. Line 20 prints the character which is at column C and line [. of the display. This jines give the equivalent of PRINT SCREENS (L,C).
Note that the line number is muluplied by 33 to allow for the NEWLINE character at end of each line. Try this out using the column and line numbers on page 123 of the manual. Remember to print something on the screen first from wilhin program. in wont'i work as edirect command because the screen will be cleared First'

Tuble 1 is a disassembly of the short machine code routine used to transfer the display file to a string array. The machine code routine presented here 15 only for wise on a 2X81 wah sufficment memory to give a fully expanded display file. It will trantser 22 lines of 32 characters into a string array which must be the first defined variable. By transfernag the characters to the first varable in memory, we avoid the need to unclude a search routme. The lines are lamued to 22 so that you cant copy data back to the screen using the BASIC PRINT command rather than mother machine code routine.
The first section of the routine finds the address of the start of the variables area which is held in the system vanable VARS and moves on to find the first element of the array. Page 174 of the manual explains this step
It then finds the address of the first byte of the display file, skips over the NEWLINE character and then transfers the next 32 bytes of the display file into the firss 32 bytes of the array. The code then repeats the operation untul 22 lines have been transferred.
Key in the machune code of Table !, using the decmal loader given in Listing 1. Make sure the REM statement in line I contans at least 24 characters. RUN this program which will prompt you with the address of the next byte to be entered. Key in the byte value corresponding to the address on the screen followed by NEWLINE.

Repeat until all the code has been entered When all 24 bytes have been unput, you will get the report 0/70. Wist the program
and delete lines 10 to 70. Key CLEAR NEWLINE and save the code as SCREENS
Test the routme by keying in Lisung 2. Thus CLEARs the variables area so that AS is the first defined vanable and can be found by the routine. This string array will hold the characters whith make up the screen

Lines 1, 10 and 20 should always be the first three lines of
a program using this routhe Indeed it is a good sdea to save these lines as SCREFN\$ rather than just line !
Lines 30 to 80 produce an example screen. Line 90 calls the routine which then transfers the display to As. Line 100 clears the screen and line 110 reprints it in a fraction of the ume it took to set up originalily.

If you now SAVE Lising 2, the screen display wull also be saved as the varjable As. Should you want to store $\#$ number of screens in your programs, you should first transfer the contents of $\mathrm{A} \$$ to another array. Calling the routine agam will transfer another screen unto As You can repeat thes as often as you like until you run out of memory.

Table 1. Disassembly of SCREENS

## Alice in Videoland CBM 64 £8.95

Audiogenc, PO Box 88, Reading Berks

This isn't 50 much $\begin{gathered}\text { gime as a } \\ \text { ata }\end{gathered}$ collection of dames. There are four scenes, which are loaded from lape separately. They are linked by the Alsee theme, and also by the fact that your score in one scente can affert your chances an another.

You sien with a tete sequence which shows Alice chasirg the Whate Rabbit. The first scene it Alice faling down the hole, catching keys, boutles and cakes. These have to be used to enable her to pass through doors in the hall. The second scene has A+rce caiching bread-and-butierПies and rocking-horse fles under the watchful gaze of the Cheshire

Cal and the Caterpilar. Then it's on to al glant chess board, and a game of strategy ㅍgganst the Jabberwocky and the Tweedles. Finally, there 15 game of croquet, wheh is quite tracky.

The Braplucs and sound effeas are superb. The games wre is good ins you could expect, cons)dering that you get four of then for your woney. The worsi tearute is the delays belween senes; if you have sise dinve, it's well worth payig extra for at copy on dise.

## Prenzy CEDA 64 E7.9S

1 Micro Power, Sheepscar Hse, Sheepsener Si South. Leeds

Simple themea often ecsutl in excellent games - here's 星 good example, though owners of Sux will recognse the iheme.

Everything alarts easily enough wath one escaped lepton bouncing round the walls or your research lab. You must trap it by walling up portions of the lut and eventually the lepron tocif If the lepton bula the log-trat wall you're workmg on before It's completed, then basg ges a life. There $\begin{aligned} & \text { re } \\ & \text { iwo speds of }\end{aligned}$ build; slowly unneked portions are worth more than fast-filled ameas

As well as points for the areas caprored and lepiots caught. there if e lime bonus for speedy completion of each screcti. On the second screen. a chaser appears and tracks you round the walls - much stower, bul equally lethal at the leptons. With further screens, mare leptons and more chasers appear until there are live of each to cope with.
 tbinking it tis pot soicly dependent on chance. Leptons alway bounce al 45 degrees off walls, so stralegy and plansing are possible, and pay dividends. That for me is what makes it 50 playable.

## Chopper orie！ Afntes ank EREO

Severn， $15 \mathrm{H}, \mathrm{gh}$ St，Lyndney， Glas GUs SDP

In thus side scralling game－ scroling from right to left－you fly a hehcopter through three diflezent slages，fin the first，you shoon enemy helicopsers and aitcraf1 and avoid missies as they speed towards you，

In the secont，you can＇t shtoot back，but the enemy baltoons and arships don＇t shoot esther． J ＇s just a case of avoiding them． In the thati，you arrive at the enemy bise．You bave to hit the contrals at the end of the veat lator shafis．When thes 15 done，E sht appears on the bartief whith you thoot to destroy the base comptecely Two

## Indestructibee helicopters guard

 the shafis in betwein these seages，you refuel by gunding your chopper＇s refuellag pipe When the three slages are completed，they are repeated at a fastet rateThe graplacs are superb．The characeers are meredıbly well defoned and sound is used to good eflect All the expected options are here and，ovetrall， thus is an addictive shoot－＇em－up with some of the besi graphits around

## Run for your life

> Four exciting games to have you on the edge of your seat． our reviewers give you the low－down

Mushroom， 193 Rommany $\mathbb{R d}$ ， Londor SF 279 PR In the early days when file was simple，there was space invaders． rrogere and scramble．Compared to many current games，these were pramulue，but in spte Hof this they were goodtes Mushroom seem to concur since they have produced 盎 copy of scramble．And，I must say，it＇s as good as any l＇ve seen．

You pilot a space ship moving left to right down six sets of terrain．Yous collect fuel by bombing fuel dumps and you shool，bomb and geterally avoid sundry obssacles．The only weird part 15 screen five．Thus appears non standard．The prime opposition is a hoerd of nassy green toads．
The design is excellemi $\mu$ in smoolh scrolling and meev lamamated radar samners ant tockel exhauss．The muste is an yappalling version of Paint it Black and the orly way to toggle at on and off is to shoot or bomb musical notes scatiered about thes iandscape
The first five screens are slightily on the easy ande．The last screen is really tough Thas should appeal to beginners who want 10 feel they＇re geting some where
If you really need a scramble to complete your collection，this one＇s worth a good look

The only thong clreap abous flooty is the prece．Onte is most impressed by the loading scretm of $\begin{gathered}\text { alleon by moonlight and }\end{gathered}$ when loading is complete，the ammation of the waves coupled With the hornpipe music，create a
good impression，mamtonned when the game staris．

You are located below decks in the pirate＇s galleon and your objective is 10 unlock the bullteal ins rucions ptayabulity

## Footy

 ank Spectrum
## doors and discover that the hold

 is quile a labyrinth．Golng through cerfan doors is slighily dodgy，as there is nothing on the other sude bul a sheer drop，so be careftlThe graphocs are smooth
moving and the sound is excelient，the game has quite an addicatve quality which is an indication that it should do well，
and l＇ve certamily seen games of comparable quality selling for hree tomes thas price．\＄0 get ourseif in ancom and stulfed collecting treasure To prevent this，the area is patrolled by prates with large cullasses and parrols so you dodge up and down ladders，collect keys，open

## Robenctive Tr 11 18

Absolute， 8 Chapel LB
Valuable baryels of uratium ar an unusual ireasure to cablect neverlheless，plenty lie discarded in a contamanated thate．You woll t le mhany thar health ty drscending inio vis depihs，as a rembe controlled robot is ready to command
The screen displays a cavern， and there are tirise different ones altogether，in which be nue barrels．If all barrels ere collected withan the lime limir． which decreases at more adivanced levels，then the robol conlmues in the trext savern Poin1s are awarded for each harsel collected，ws are boguses for completing each screen in for completing each sceeen 1 in prepared．To reach mach of the barrels，the robot must be takem along an exact route to make full use of plalforms and ladders．A wrong course makes the task mpossible There are huge mulant unsects that unhabit the mane，which prove to have an miense dislike of robots
Conirol of movement is from I joystick，using up．down and top left and right diagonals Since some Texas jovstucks are diflicult to posilior on the diagonals，mine included． frustration with the hardware ultumately spoils the game．This needs exlended BASIC．

## We've got

£1,400-worth of prizes on offer this week. you could win two great games from

## Hewson

## consultants

We've got ant extra treat for you this week -E1,400-worth of prizes are on offer to owners of Spectrum and Amstrad computers. One hundred whners will each receive two games, Technictan Ted and Heathrow International Air Traffic Control, from Hewson Consultant's popular range. Technician Ted costs $£ 5.95$ on the Spectrum and $£ 7.95$ on the Amstrad CPC464, HIATC is priced at $£ 7.95$ for both computers.
[ammelan ted is man emusing

## ! 

Escapade 14 a siticen chip factory you play the part of the incompetent hers who can't even manage to clock on without problemis. li's an arcade adventure whth 50 sereens and accordeng lo Hewson Contsaleants "the seaphics are evtremely clear and tasied ${ }^{\text {a }}$

In your roie as Ted, you attembs to complete yous day"s work to the accompaniment of the Bliue Danubr and the Radersky march. The game was writent by Steve Marsden and David Conke who boilh have first hand experience of warkipg in a mecto procersor pland Let's hope the silicon chips they work with are thore co-operalave than Ted's!
HIATC places an enosmous weighe of rexponsmblity of yous shoutders is you alake charge of the skies above Heathrow International Aurport. The author is a professhontal AFC al Heathrow so simulator fant shoutd find this program very reatistic

The game Features Concorde, Jadio fatuges and rogue alecraft to
deep the exisemens al a peak. Yous task is to land 10 marctafil safiely This job is rery compley and has been broken down into dillerent levels of expernise
Stude iwo of the cascelte contans an alternative verszor pased on Sbiuphol Aurport, Amstcrdam's equasaitens of Heathrow
So, if you thave a sense of humour and asense of responsibil try, these gimstas are for you. Enter sow, you cousd be one of the Jucky $140^{3}$

## How to enier

sudy the two cartorns - there are a number of differences between them. Clitcle the differenies on casteon 8 and seal the curtoon and coupon in an envelope, Wrice clearly the number of differences you found on the bask of the envelope
Post your entry to: Hewson
Compuing Weskly, No. 1 Golden Square, London WIR 3AB Closing daze is a1 first poss on f inday Febutuary 8, 1985

You may enter as muny ames as you wish, but each sentry musl be of an official coupoat - Rot a copy and sealed in a separate envelope Imparanal: please follow carefully the guideanes on eniering -meomplese courms and enities in envelopes with no numbers on the back carnors be considered. is you are a winner, the saunoss will be used as a tubet to send your prize. so clear wriling is ensesisal

## The rules

Enines will mot be acterised from emplayeer or Argul Speciuits Publica tans. Hewson Consullanis and Atribst tes Passmore of Soms. Thos restruiliten also arolies to empioyees' fomiltes and aktnis of the conpontex

# New-the official Spectrum Upgrade! Turn your Spectrum into a Spectrum + for just $£ 30$ 

 Spectrum ownes ... the official Spectrum Ujpgrade Kit

The $£ 30$ Kit has everything you need to turn your 5 pectrum into the stylish new Spectrum + You don't even need an understanding of electronics, just the ability to solder a few wires together! The leaflet in the kit gives clear, step by step instructions.

If you're not sure about doing it yourself, don't worry Simply return your 48 K Spectrum to Sinclair and for $£ 50$ we'll upgrade it for you

Whichever you decide on, youfll also receive the new 80 -page User Guide and Companion Cassette The bigger, better Spectrum keyboard
The Spectrum + measures $12^{1} h^{\prime \prime} x$ 6." It has a large typewriter-style keyboard, with hard, moulded keys.

You'll find the new keyboard has a smooth, positive action - ideal for touch-typing word processing simulation programs, and entended programming sessions. Two rectractable legs give a perfect typing position

There are 58 keys in all, including 17 new keys. Programmers will be pleased to see dedicated punctuation keys, a space bar, and separate shift keys for graphics and extended modes. And a resel button allows you to clear a program from your computer's memory without disconnecting the power supply.
The official Spectrum Upgrade Naturally your upgraded compouter will accept all the peripherals in your Sinclair system-Interface 1 , Microdrives and so on, as well as all

Spectrum software.
fust as importank, new Spectrum software and peripherals will be designed with the Spectrum + in mind. So the Sinclair upgrade adds stylish looks, new capabilities ... and new potential for the future. Included - the new Spectrum + User Guide and Companion Cassette
The new User Guide has over 80 pages of information, including a handy BASIC dictionary The Companion Cassette provides an interactive tour of the new keyboard, and includes three entertaining arcade games.

## TO ORDER BY MAIL:

When ordering the Upgrade Service, send off your 48 K Spectrum to the address below carefully wrapped, together with the completed coupon and appropriate payment (Please do not return the mains adaptor, manual or other ancilaries.) Your upgraded computer will be despatched to you within 10 days of receving your order When ordering the Upgrade Kit. simply complete the couponendosing the appropriate payment and post it to us at the address below. Please allow up to 28 days for detivery BY PHONE: Access or Bardaycard holders can call Camberley (0276) 685311 for personal attention, 9 am to 5 pm Monday to Friday Only the Upgrade Kits can be ordered by phone

Please note the upgrade offer applies to working 48K Spectrum models in the UK ank:
